

It's 2 AM and you're on shore. Who's watching the yacht?

You can't be onboard 24/7 but that doesn't mean that your Yacht can't be with you.

The chances are you already know about SiMON, the onboard system that seamlessly connects to your existing network and monitors alarms and control sensors throughout your vessel but, up until now, there's been one little problem that SiMON couldn't handle...

How are you supposed to know that you have a critical shipboard failure or emergency if you're nowhere near your ship?

Meet SiMON Anywhere, the SiMON add-on module that you can trust to seek you out and report any change in your yacht's monitored systems no matter where you are, no matter what time it is, and no matter which communication device you choose to use.

Now you can rest, play, and work easier knowing that you will be notified immediately of any critical system malfunction or security breach the moment that it is detected.

SiMON Anywhere works to keep you informed

The SiMON Anywhere module and its cellular modem is simply connected to your existing SiMON system.

After that, whenever you choose to have SiMON Anywhere active, it forwards compressed snapshots of your Yacht's critical system data to a secure server located in Palladium's *SiMON Anywhere Data Center* the moment that SiMON detects a reportable event. This means that you will have a permanent record of any monitored event that you can review with the Captain, Engineer, Owner,

Insurance Company, or any other person that you specifically grant access to.

Plus, when you log into the *SiMON Anywhere Data Center* from any Internet-connected computer, you can see current and historical data on each alarm and sensor point/system. Trending is also available so you can specify a date range and view historical data in a graphic format.

SiMON Anywhere tracks you down like a bloodhound

Because reviewing logs after the fact is not enough to grant you the peace of mind that you need whenever you are away from the yacht, SiMON Anywhere sends alarms directly via the cellular modem to any cell phone or other cellular-enabled device that you designate. You can even send alarms to multiple people at the same time, or designate different types of alarms to go to different people. A simple user interface allows you to set up totally flexible notification lists.

The engineers at Palladium designed SiMON Anywhere so that it can transmit over cellular networks while you're in coastal range, via the yacht's satellite system when you're at sea, and even via direct broadband connection while you're at the dock.

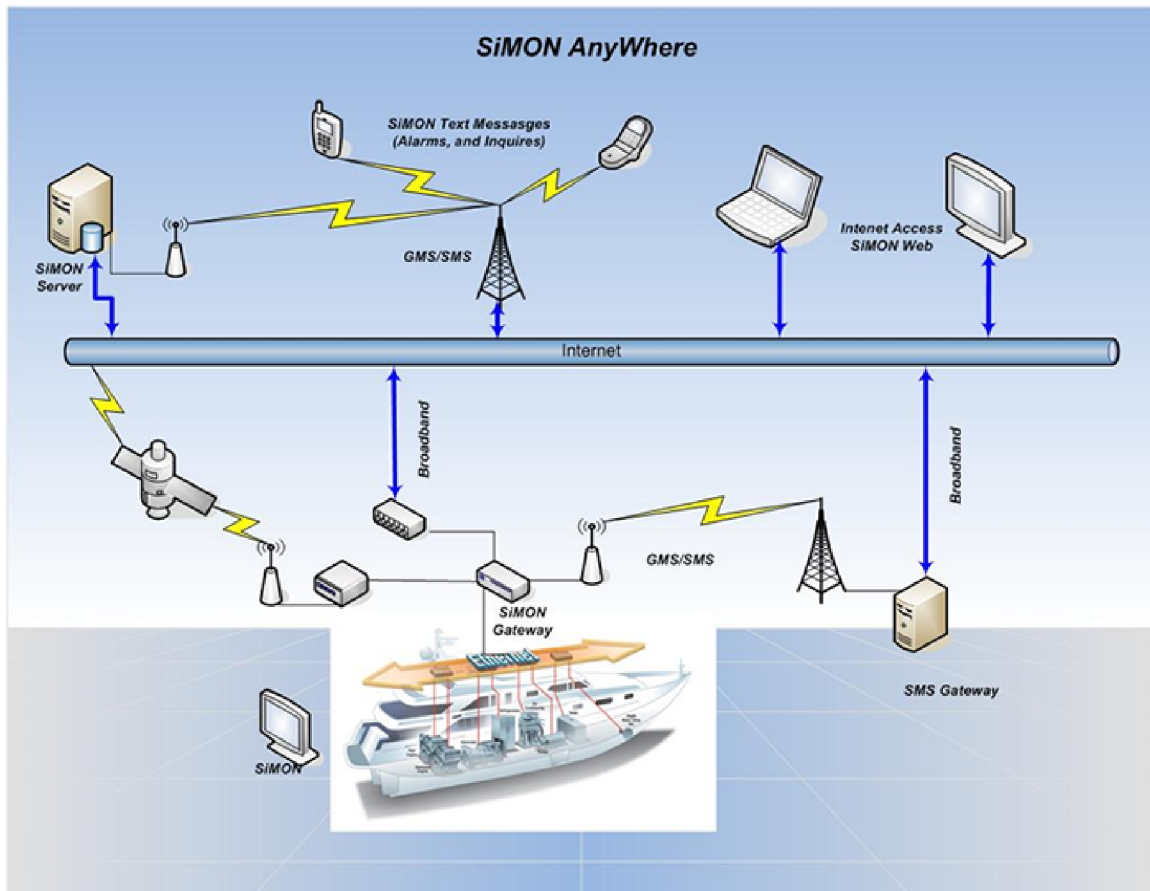

SiMON Anywhere reports whatever SiMON says.

It's easy to remotely monitor anything that SiMON is watching including...

- Fuel usage
- GPS location tracking
- Speed
- Engine and generator operation
- Bilge levels
- Tank levels
- Security status...

...as well as anything else that you've made SiMON-enabled. SiMON Anywhere can even act as a Yacht Tracking System by transmitting a chart depicting the yacht's current location as well as its passages.

Take a look at how simply sophisticated the SiMON Anywhere module is and how easily it snaps into your existing SiMON network.

SiMON Anywhere features:

- Anywhere access to ALL of the Yachts operational data
- Trending of operational data, pinpointing exceptions
- User configured screens with SiMON gauges
- Security breach notifications
- Transmission of monitored events to any cellular device.
- World Wide WEB access/connectivity
- Historical data capture and storage
- Yacht tracking via world chart, with Zoom, and Pan
- User configured User ID's and Passwords

Since you are already enjoying the added safety and security that SiMON brings to your yacht, why not extend that protection to every corner of the world with SiMON Anywhere. It's like carrying your our Yacht in your pocket wherever you go.
